PUBLISHERS' NOTICE.

The Publishers desire to return their thanks to the many correspondents who have assisted in the compilation of the present Edition of the Almanac. They will gladly welcome any hints, corrections, or information for next year's publication. Though the issue of the Almanac has been delayed; they regret they are compelled to go to press without the Mail Tables for 1881. The Time Table for the Torres Strait Mail Service, though drawn up, has yet to be confirmed by the Contractors; the P. & O. Time Table had not been received from England by the Melbourne authorities; nor had the Californian Table come to the hands of the Postal Department in Brisbane. If these Tables are available within a reasonable time they will be issued as a Supplement.

THE BEST FAMILY NEWSPAPER IN AUSTRALIA.

AUSTRALIAN LADIES—A full page of READING for LADIES is given in every issue of the *Sydney Mail*. The scope of the articles is not circumscribed by the conception, frequently apparent in the "Ladies' Column" of newspapers, that only Fashions and Frivolities have interest for women. Extracts of Items of News or of valuable ideas bearing upon feminine occupations and requirements are sought from every source, far and wide, while the lighter toises of Fashion, Society, &c. receive particular attention—Special Lady Correspondents supplying from London letters devoted to chit-chat and to the Fashions, which latter are handsomely illustrated.

THE ILLUSTRATIONS in the *Sydney Mail* are designed by the best Artists in N. S. Wales, and executed by the best available engravers. They represent all current events capable of pictorial treatment, and are a special attraction. For subjects demanding large and free treatment lithography is frequently employed.

LITERARY MATTERS are especially attended to in the *Sydney Mail*. Original contributions by the best Australian writers—including such names as Marcus Clarke, the Rev. J. E. Tenison-Woods, F.G.S., F.L.S., &c., N. Walter Swan, the Rev. A. C. Geckie, D.D., Henry Kendall, &c., &c.—are constantly appearing in its columns, and from all sources a plentiful selection of the most curious and interesting extracts is chosen and published in each week's issue.

CHILDREN will find a page all to themselves. Pretty little original stories inculcating useful lessons, without being in the least degree formal or dull; Little Jokes for Youngsters, and Evening Pastimes of Riddles, Enigmas, &c., have made the *Sydney Mail* a great favorite with young people.

READERS IN THE COUNTRY DESIRING a newspaper for general news, information, and amusement, will do well to subscribe to the *Sydney Mail*. It is the most useful Family Paper published in the colonies.

FARM NOTES FOR THE MONTH, PASTORAL and agricultural notes, the weather, agriculture, pasture, and condition of Stock, news from the provinces, produce, cultivation, &c., are edited by a gentleman of multifarious experience in all matters touching the soil and its products, occupy several pages of the *Sydney Mail*, and so make it a paper for all interested in agricultural and pastoral pursuits.

THE LATEST EUROPEAN AND INTER COLONIAL TELEGRAMS are given in the *Sydney Mail*.

THE NEWS OF THE WORLD is especially and exhaustively collated for publication in the *Sydney Mail*, which gives its own assortment of news, and is not, as many weekly papers are, a mere reprint of a daily journal.

The *Sydney Mail* is so arranged as to be not a merely local publication, but **A FAMILY JOURNAL FOR ALL THE COLONIES.**

In addition to the Illustrations in the body of the paper—**NOBLE ART SUPPLEMENTS ARE ISSUED PERIODICALLY.**

THE SERIAL STORIES ARE BY THE BEST AUSTRALIAN TALENT, the proprietors having recently awarded £100 for the best tale submitted in competition for the *Mail*; and having arranged for a constant supply of fiction by Australian Authors.

Subscription to the *Sydney Mail*: 6s. 6d. per quarter, 13s. per half-year or 26s. per annum.

JANUARY corresponds to July in Great Britain. It is usually one of the hottest months of the year, and is marked by frequent thunderstorms. In January, 1880, the weather was cooler than usual during the month, the mean shade temperature, 76.3 deg., being 1.9 deg. under the average of this month for the previous ten years, and 2 deg. under the average of the previous three years. The highest reading in shade, 91.0 deg., was on the 15th; the lowest on

grass, 56 deg., was on the morning of the 13th. The mean barometric reading, 29.922 inches, was 0.006 inches under the average of the month for the last ten years; the highest, 30.112 inches, was at 9 p.m. on the 11th, and the lowest, 29.936, at 3 p.m. on the 9th. Rain fell on 12 days; the total fall, 3.30 inches, being 3.35 inches under the average of the month for the previous ten years. The maximum fall during 24 hours, 0.97 inches, was on the 29th.

GARDEN, ORCHARD, AND FARM CALENDAR FOR JANUARY,

Written expressly for Slater's Almanac, by Albert John Hockings,

Author of the "Queensland Garden Manual," "The Flower Garden in Queensland," &c.

GARDEN AND ORCHARD.—Dig deeply all unoccupied beds, turning in all such Garden refuse as will add to the fertility of the soil by its decay. Heavy soil is much improved in texture when thrown up roughly and exposed to the influence of the summer's sun; being rendered more friable. Fork between the rows of vegetables when the soil has become hard after heavy showers. Water vegetables freely in dry weather, giving occasional dressings of liquid manure. Do not splash the surface of the ground only; but, when water is given to a plant, see that it reaches the root. In favorable weather sow French beans, brocoli, cabbage, carrot, cauliflower, celery, mustard, cress, lettuce, endive, okra, peas, parsnip, parsley, radish, salsafy, scorzonera, prickly spinach, turnips, Brussels sprouts, and a few cucumber, vegetable marrow, and melon seeds, for late crop. Plant out cauliflowers, cabbages, &c., laying a leaf over each to protect it from the sun for a day or two. Gather herbs for drying, also onions, garlic and eschalots, as the tops die

down. Peach, apple, and other trees should be formed during summer by disbudbing with the finger and thumb when the shoots are ill placed, and by nipping off the ends of those which are too long or over vigorous. Vines should be tied as they grow to protect them from injury by high winds, and in doing this be careful to arrange the foliage, so as to shelter the fruit from the direct rays of the sun. Gather grapes, peaches, and apples, as they ripen. Vigorous shoots of the Isabella grapes may still be pruned to produce a second crop. Vines layered now are likely to make good roots before winter. Cuttings of any valuable new sort which it is wished to multiply quickly, should be put in during this month in favorable weather. Carefully remove suckers from vines and fruit trees.

FIELD.—Destroy weeds before they seed; break up land in preparation for future crops; sow Cape barley, rye, and oats, for green fodder, and maize for a late crop. Keep growing crops clean.

FEBRUARY corresponds to August in Great Britain: the weather is generally excessively hot and sultry with a humid atmosphere. In February 1880 the weather was cooler than usual during the month, the mean shade temperature, 75.3 deg., being 2.3 deg. under the average of this month for the previous ten years, and 3.2 deg. under the previous three years. The highest reading in shade, 97.0 deg., was on the 14th; the lowest on grass, 62.0 deg., was on the morning of the 11th. The mean barometric

reading, 29.966 inches, was 0.001 inches under the average of the month for the last ten years; the highest, 30.126 inches, was at 9 p.m. on the 1st; and the lowest, 29.642 inches, at 3 p.m. on the 12th. Rain fell on 26 days; the total fall, 9.50 inches, being 1.53 inches over the average of the previous ten years. The greatest fall in 24 hours, 2.93 inches, was on the 22nd. The total rainfall of the year 1880, up to 25th February, was 12.80 inches, on 33 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR FEBRUARY.

GARDEN AND ORCHARD.—This should be an active month. Dig roughly all unoccupied beds which have been previously trenched, adding well decomposed manure. Transplant cabbages, Brussels sprouts, cauliflowers, celery, &c. Sow French beans, beet, Brussels sprouts, carrot, cauliflower, celery, mustard, cross, lettuce, radish, prickly spinach, endive, onion, peas, parsnip, and turnip. Mutch the melon and cucumber holes with a dressing of long stable manure; form the surface between the holes so as to catch water during thunder showers. In very dry weather, when the plants appear to suffer, give ten to twenty gallons of water in the evening to each hole, so that they may be thoroughly soaked, applying the water so that it may get into the soil where the roots are. Gather seeds as they ripen. Cucumbers, melons French beans, &c., should be gone over daily, and gathered as soon

as they are ready, whether they are required or not; for if left on to perfect their seeds the plants cease to be productive. The fruit should be thinned from Hockings' canvase and greening apples, and the branches carefully propped, lest the trees be broken by its weight. Finish budding trees which are intended to stand over until spring. Collect leaf mould for use when planting fruit trees during the approaching winter. Loosen ties of budded trees.

FIELD.—Continue to prepare land, ploughing it deeply. Lucerne may be sown in clean well-ploughed deep soil. Vetches or tares, Cape barley, and sorghum should be sown for green food for stock. In sheltered and warm positions 90 day maize may be sown. Early potatoes may be planted whole. Keep the land clean, and hill up maize.

MARCH corresponds to September in Great Britain, and begins to show a pleasant decrease in temperature. In March 1880 the weather was warmer than usual, the mean shade temperature 75.7 deg., being 1.1 deg., over the average of this month for the previous ten years, and 0.1 deg over the previous three years. The highest reading in shade, 96.5 deg., was on the 12th; the lowest on grass, 59.0 deg., was on the morning of the 27th. The mean barometric readings were

below the average of the month; the highest, 30.176 inches, was at 9 a.m. on the 14th; and the lowest, 29.612 inches, at 3 p.m. on the 26th. Rain fell on 19 days; the total fall, 4.38 inches, being 3.74 inches under the average of the month for ten years, and 0.24 inches over the previous three years. The greatest fall in 24 hours, 0.92 inches, was on the 1st. The total amount of rain that fell in the year 1880, up to 31st March, was 17.18 inches, on 57 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR MARCH.

GARDEN AND ORCHARD.—If previous instructions have been followed, the seed beds will be full of young plants, and there will be sufficient land well dug and manured ready to receive them. Plant out cabbages, cauliflowers, Brussels sprouts, celery, &c., in favorable weather. Keep the beds free of weeds by frequent and deep hoeing. Give asparagus beds a dressing of salt. Transplant eschallots. Sow English beans, French beans, beet, carrot, mustard, and cress, celery, lettuce, endive, leek, onion, peas, parsnip, radish, prickly spinach, turnip, couve tronchuda, savoy, &c. Make note of fruit trees or vines that have been sickly or unproductive during the season, so that they may be manured, syringed, scrubbed, pruned, or grubbed out as the case may demand. An unprofitable, unsightly, or inferior tree should not be allowed to cumber the ground. No crops should be grown near fruit trees.

Orange trees are often killed by digging about them. All land intended to be planted with fruit trees during the approaching season, should be trenched and manured this month, if not already done. All stiff or retentive soils should be carefully drained six inches deeper than they are trenched, regardless of the inclination of the surface. It should be remembered that the roots of the trees will be under the surface where the water will be retained, unless drainage be provided. Orange trees in a state of rest may be transplanted this month.

FIELD.—Sow lucerne, clover, rye grass, prairie grass, oats, barley, wheat, vetches or tares and sorghum. Sow main crops of potatoes. Hoe early potatoes; gather maize as it ripens; cut tobacco leaves as they arrive at maturity. Sow mangold and Swede turnips for winter food for stock.

APRIL corresponds to October in Great Britain; cool weather is now setting in, and nights are frequently chilly. In April 1880 the weather was much cooler than usual during the month, the mean shade temperature, 70.1 deg., being 0.8 deg. under the average of this month for the previous ten years, and 1.3 deg. under the previous three years. The highest reading in shade, 94.0 deg., was on the 2nd; the lowest on grass, 49.0 deg., was on the morning of the 29th. The highest barometric reading, 30.321,

was at 9 a.m. on the 12th, and the lowest, 29.801 inches, at 3 p.m. on the 2nd. The mean barometric reading, 30.082, was 0.044 inches above the average of the month for the previous ten years. Rain fell on 18 days; the total fall, 8.95 inches, being 5.42 inches over the average of the month for the previous ten years, and 4.87 inches over the previous three years. The greatest fall in 24 hours, 1.76 inches, was on the 26th. The total amount of rain which fell in the year 1880, up to April 30th, was 26.13 inches, on 75 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR APRIL

GARDEN AND ORCHARD.—Keep down weeds by continual hoeing. Thin out plants that are overcrowded. Divide and plant out pot herbs, giving water if requisite, until they are established. Plant out cabbages, cauliflowers, &c., in favorable weather. Sow English beans, mustard, and cress, lettuce, endive, leek, onions, peas, radish, &c., for succession. Sow hardy annual flower seeds. Evergreen shrubs, roses, and bulbs, may be planted. Where practicable the transplanting of fruit trees should now be proceeded with; and, if done with care, they will soon emit new roots, and be established in their positions before the final fall of the leaf. This applies especially to evergreen fruit trees, such as lemons, oranges, dates, mangoes, loquats, olives, tamarinds, &c. In transplanting take care that a sufficiently large hole is dug to allow of the roots having

ample room; do not set the transplanted shrub or tree any lower in the new ground than in its original place. For some days it is well to shade it, either by matting on sticks or any other contrivance that may answer the desired purpose, minding that the wind does not blow it down. Water should also be freely applied till the tree has settled itself in its new position. Prop up bananas which have heavy bunches of fruit, as they are apt to be blown down by the winds now prevailing.

FIELD.—Sow vetches, lucerne, wheat, barley, oats, mangold, and Swede turnips. Gather sorghum and Imphee as they ripen, or the birds will either consume or scatter it. Plough land for future crops. Cut and house tobacco as soon as it arrives at maturity.

MAY corresponds to November in Great Britain. The Queensland winter may now be considered as having begun. Weather generally cool and enjoyable. In May 1880 the weather was slightly cooler than usual during the month; the mean shade temperature, 64.7 deg., being 0.6 deg. under the average of this month for the previous ten years, and 0.2 deg. under the previous three years. The highest reading in shade, 85.5 deg., was on the 24th; the lowest on grass, 43.0 deg., was on the morning of the 28th. The highest barometric reading, 30.286 inches, was at

9 a.m. on the 6th, and the lowest, 29.759 inches, at 3 p.m. on the 10th. The mean barometric reading, 30.042 inches, was 0.011 under the average of the month. Rain fell on 3 days; the total fall, 0.24 inches, being 3.76 inches under the average of the month for the previous ten years, and 4.56 inches under the previous three years. The greatest fall in 24 hours, 0.24 inches, was on the 26th. The total amount of rain which fell in the year 1880, up to May 31st, was 26.37 inches, on 78 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR MAY.

GARDEN AND ORCHARD.—Transplant onions, garlic, eschalots, rhubarb, &c. Sow lettuce, endive, leek, onion, peas, radish, mustard, and cress, cabbage, turnip, carrot, parsley, and pot herbs. Dig beds intended for asparagus. The onion crop sometimes suffers severely from the ravages of a green grub which is in some soils in large numbers. They come forth at night and cut off the young onions level with the surface as if cut off with a knife. Land intended for this crop should be previously examined for these pests, and if possible receive a dressing of soot, which would not only prove very obnoxious to the grubs but would be a valuable manure for the onions.

Transplant fruit trees and evergreen shrubs. Do not plant too deep; put fine mould among the roots, making it firm, using water copiously unless the soil is wet. Transplant strawberries into leaf mould or well-decayed cow dung, giving them abundance of water during their growing season. In cold situations, protect tropical fruit trees, and throw a little hay over the pine apple plants, with the same object.

FIELD.—Sow vetches, barley, oats, rye, wheat, lucerne, and other grasses. Cut tobacco. Earth up potatoes. Rye, as green fodder, is much relished by cattle and horses, and if not allowed to go to seed, it will make a good sward for grazing over, being green and succulent during winter and early spring.

JUNE corresponds to December in Great Britain; weather generally cool, with fine clear nights and sometimes heavy dewfall. In June 1880 the weather was a little colder than usual; the mean shade temperature, 59.9 deg., being 0.7 deg. under the average of this month for the previous ten years, and 0.1 deg. over the last three years. The highest reading in shade, 78.0 deg., was on the 4th; the lowest on grass, 34.50 deg., was on the morning of the 21st. The highest barometric reading, 30.318 inches, was at

9 a.m. on the 12th, and the lowest, 29.862 inches, at 3 p.m. on the 8th. The mean barometric reading, 30.115 inches, was 0.002 inches under the average of the last ten years. Rain fell on 3 days; the total fall, .004 inches, being 3.33 inches under the average of the month for the last ten years, and 3.28 inches under the last three years. The greatest fall in 24 hours, 0.02 inches, was on the 13th. The total amount of rain which fell in the year 1880, up to 30th June, was 26.41 inches, on 81 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR JUNE.

GARDEN AND ORCHARD.—No colonial grown cabbage seed should be sown until after September, as it runs to seed when the plants are ready to heart. The English seed does not run until the second season, and will therefore heart perfectly. Transplant horseradish, eschaloats, rhubarb, strawberries, seakale, &c. Dig over old rhubarb, seakale, and asparagus beds, giving them plenty of good rotten manure. Sow broccoli Brussels sprouts, cabbage, red cabbage, cauliflower, lettuce, endive, peas, English beans, radish, &c. To grow water cresses, dig a trench, as if for celery; turn in abundance of well-decayed manure at the bottom, sifting some fine soil over it, and dibble the cuttings in at a foot apart, give the whole a good watering. Orange trees which are not in good health, should have their trunks and large branches scrubbed with a scrubbing brush, and washed clean before the spring growth commences. The surface soil, to the full circuit of the foliage of the tree, should have a

dressings of stable manure. Apple trees afflicted with American blight should have the earth removed from the roots near the surface, and they should be painted with castor oil or strong Gishurst Compound. Some sorts of apple are "blight proof," and these should have the preference when planting, as far as practicable; and the others should be worked upon stocks which are blight proof. Transplanting fruit trees and vines should be proceeded with vigorously. Prune fruit trees and vines, protect bunches of bananas in cold situations, by covering each with a light bag open at the bottom.

FIELD.—The arrowroot will fill out rapidly as the cold checks the growth at the top. Sow oats, lucerne, ryegrass, vetches, prairie grass, &c. Prepare land in warm situations for sowing with maize and planting with potatoes next month. Early sown wheat often escapes rust and other ills which affect later crops.

JULY corresponds to January in Great Britain, and like it, it is the coldest month of the year, though the sun has considerable power in the middle of the day. In July 1880 the weather was warmer than usual during the month, the mean shade temperature, 60.7 deg., being 1.5 deg. over the average of this month for the previous ten years, and 0.6 over the previous three years. The highest reading in shade, 6.82 deg., was on the 28th; the lowest on grass, 34.0 deg., was on the morning of the 23rd. The mean barometric

reading, 30.153 inches, was 0.015 inches above the average of the month; the highest, 30.416, was at 9 a.m. on the 11th, and the lowest, 29.816 inches, at 3 p.m. on the 3rd. Rain fell on 6 days; the total fall, 0.97 inches, being 2.72 inches under the average of the month for the previous ten years, and 0.68 inches under the previous three years. The greatest fall in 24 hours, 0.29 inches, was on the 15th. The total amount of rainfall during the year 1880, up to 31st July, was 27.38 inches, on 87 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR JULY.

GARDEN AND ORCHARD.—Plant asparagus beds. Sow cauliflower, carrot, beans, lettuce, endive, radish, spinach, &c. On sowing seeds after rain, see that the land is in a friable condition. If too wet it will clog and bind together. Plant out onions and eschalots. Three or four days after planting, rake the soil between the rows in dry weather: it will kill thousands of young weeds. Finish pruning fruit trees and vines. Plant out fruit trees and vines, and cuttings of grape vines, and such trees as are propagated in that manner. Graft young orange trees. The Seville orange forms the best stock upon which to graft approved sorts. Prepare land hitherto neglected, that all planting may be finished by the end of next month if possible. Eradicate docks, and give a dressing of salt to the vines and fruit trees,

lightly forking in well-decayed manure where necessary.

FIELD.—Finish planting lucerne. Sow oats, vetches, &c. Prepare land for potatoes, maize, tobacco, sugar-cane, carrots, mangel wurzel, chicory, &c. Plant potatoes and maize. Take up and prepare arrowroot as the crop matures.

HINTS.—Never grow the same crops, nor crops of the same family twice on the same spot, without an intervening crop of a different nature.

Never transplant shrubs, or trees in a growing state. However carefully it may be done the check is dangerous and often fatal.

Let the drainage of the ground be your first care. It is impossible to succeed to any extent with vegetables or flowers, when the water is stagnant in the soil.

AUGUST corresponds to February in Great Britain, and is for the most part cold, but towards the end a rise in the temperature may be noticed. In August 1880 the weather was warmer than usual during the month, the mean shade temperature, 63.40 deg., being 1.5 deg. over the average of this month for the previous ten years, and 0.3 under the previous three years. The highest reading in shade, 84.5 deg., was on the 21st; the lowest on grass, 36.0 deg., was on the

morning of the 4th. The highest barometric reading, 30.484 inches, was at 9 p.m. on the 15th, and the lowest, 29.847 inches, at 9 p.m. on the 5th. The mean barometric reading, 30.147 inches, was .023 inches higher than the average of the month. No rain fell during the month. No other month, without rainfall, has been recorded in Brisbane since August 1869. The total amount of rainfall during the year 1880, up to 31st August, was 27.38 inches, on 87 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR AUGUST.

GARDEN AND ORCHARD.—Peas sown this month should have a cool aspect. A dressing of salt at this season at the rate of 7 or 8 lbs. to the perch would be a great advantage to most soils, tending to sweeten the land, destroy insects, discourage weeds, fungus, and mildew, and to retain moisture.

Sow beet, brocoli, melons, Brussels sprouts, cucumber, lettuce, endive, okra, parsley, pumpkins, vegetable marrow, radish, rhubarb, round spinach, tomato, tobacco, carrot (large sowing), leek, cauliflower, chervil, turnip, parsnip, &c. Plant out horseradish, rhubarb roots, herbs, sea-kale, asparagus, Jerusalem artichokes, ginger, &c. Destroy weeds while young, and syringe

with Gishurst Compound, plants which are attacked with aphids. Endeavour to finish planting fruit trees, vines, and other plants, as the sun will be gaining power, which will increase the labor and risk. Young orange trees which show too much bloom should have it removed, and should receive a little liquid manure to promote foliage. Graft China pears, as they break very early.

FIELD.—Keep the crops clean. Plant potatoes, maize, rice, yams, arrowroot, &c. Hoe up potatoes. Sow sorghum, imphee, teosinte, and tobacco. Silk worms will now require constant attention, feeding them frequently with young and tender leaves.

The highest reading in shade, 91.0 deg., was on the 23rd; the lowest on grass, 44.0 deg., was on the morning of the 19th. Rain fell on 6 days; the total fall, 1.95 inches, being 0.10 inches over the average of the month for the previous ten years. The greatest fall in 24 hours, 0.92 inches, was on the 15th. The total rainfall for the year 1880 to September 30th was 29.33 inches on 93 days. In 1879, the rainfall to September 30th was 57.68 inches, on 131 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR SEPTEMBER.

GARDEN AND ORCHARD.—As summer grass and other summer weeds now make their appearance, it is important to keep the land thoroughly clean. Take every opportunity to collect manure of all kinds, to be thrown into well-puddled tanks to rot down for use in autumn and winter. Valuable lessons may be learned from the Belgian farmers upon this important but much neglected subject. The Japanese are also vastly superior to us in the knowledge and practice of manuring. During the summer months in this Colony manure should generally be applied in the liquid form. See that crops are not planted too closely so as to be crowded. Trench vacant land, in preparation for future crops, leaving the surface rough, to mellow by exposure. Sow English and French beans, parsley, beet, capsicum, chili, cardoons, mustard, cress, lettuce, endive, eggplant, okra,

cape gooseberry, radish, rhubarb, round spinach, tomato, tobacco, cucumber, melons, pumpkins, vegetable marrow, carrots, parsnips, &c. Transplant cabbages, cauliflower, eschalois, &c. Plant Jerusalem artichokes, rhubarb roots, herbs, sea-kale, asparagus, ginger, earth nuts, &c. Sow roseella. In dry weather give recently planted fruit trees sufficient water at the roots, leaving the surface to be kept damp by a mulching of stable litter. Attend promptly to the disbudbing of grape vines; removing all suckers and superfluous shoots as soon as they appear. Tie up fruiting shoots to the trellises as they advance. Plant out strawberries. Graft apples and pears.

FIELD.—Keep the land clean and loose among growing crops. Plant arrowroot, yams, sweet potatoes, tobacco, &c. Sow imphee, sorghum, and maize for green fodder.

OCTOBER corresponds to April in Great Britain; the weather begins to be unpleasantly hot, with occasional thunder and sometimes heavy hail storms. In October 1879 the weather was warmer than usual during the month, the mean shade temperature, 71.6 deg., being 0.8 deg. over the average of this month for the previous ten years, and 1.1 deg. under the average of the previous three years. The highest reading in shade, 94.0 deg., was on the 22nd; the lowest on grass, 45.0 deg., was on the morning of the 9th.

GARDEN, ORCHARD, AND FARM CALENDAR FOR OCTOBER.

GARDEN AND ORCHARD.—Keep the crops clean; mulch them and give water where necessary. Vegetables should not be overcrowded during their summer growth. Sow parsley, English beans, French beans, mustard, cress, lettuce, endive, okra, radish, round spinach, beet, vegetable marrow, melon, carrot, cucumber, tomato, rosella, &c. Sow St. John's Day cabbage, which is the best for summer culture, being early, hardy, of fair quality, and withstanding heat, dry weather, and aphids, better than any other. Convert all waste vegetables into manure in some form: either to feed pigs, throw them into the tank to rot, or burn them out of the way, and use the ashes. Thin out the fruit on China peaches of all the kinds, and carefully eradicate the suckers which spring from the root, cutting them close to their origin neatly with a knife. Remove also the strong watery shoots which fill

up the inside of the tree, so as to admit sun and air, and leave the whole strength of the plant to mature the crop. Support the branches of the trees, as the fruit swells. Examine the orange trees, and if either thrip, smut, coccos, or fungus appear on the stems, scrub them as recommended in June. Tie up the vines as they grow, being careful not to injure the foliage (which performs the function of both lungs and stomach for the plant), and see that the fruit is sufficiently protected from the direct rays of the sun. Sulphur the vines upon the first appearance of Oidium. Plant bananas and pine apples. Trench and drain the land intended for planting with fruit trees in the winter; and if well cultivated, one crop taken from it, would improve its texture.

FIELD.—Clean and earth up growing crops. Plant yams, earth nuts, coffee, arrowroot, ginger, sweet potatoes, &c. Sow sorghum, imphee, &c.

NOVEMBER corresponds to May in Great Britain. Summer has now fairly set in, and the heat begins to be oppressive; though the nights on elevated positions are cool and pleasant. In November 1879 the weather was warmer than usual during the month, the mean shade temperature, 77.5 deg., being 1.7 deg. over the average of this month for the last ten years, and 0.7 deg. under the previous three years. The highest reading in shade, 100 deg., was on the 13th; the lowest on grass, 50.0 deg., was on the morning of

the 21st. The mean barometric reading, 29.874 inches, was 0.85 inches below the average of the month; the highest, 29.177, was at 9 p.m. on the 1st, and the lowest, 29.494, at 3 p.m. on the 25th. Rain (which varies much in quantity during this month) fell on 7 days; the total fall, 2.82 inches, being 1.48 inches under the average of the previous ten years. The greatest fall during 24 hours, 1.30 inches, was on the 19th. The total rainfall for the year 1879, up to November 30th, was 61.91 inches, on 144 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR NOVEMBER.

GARDEN AND ORCHARD.—As the season advances the advantage of having trenched the garden land will become more apparent. Shallow unmanured land will scarcely grow anything worth collecting in hot dry weather. At this season, the beds should have the ridges laid across the hills in sloping ground, so as to catch the showers. Thin cucumber and melon beds where overcrowded, and loosen the soil if it is bound. Fasten down the shoots with wooden pegs so as to cover the ground evenly; it steadies the plants and protects them from much injury from wind during storms. Sow French beans, melons, brocoli, Brussels sprouts, mustard, cress, cucumbers, lettuce, endive, celery, okra, radish, rosella, pumpkins, &c. Thin the early peaches as soon as the fruit is fit for cooking. Mulch the trees a considerable distance around the stems. Clear out all superfluous shoots to throw the whole strength of the plant into the crop:

not injuring or removing any of the foliage unnecessarily. Remove suckers from grape vines, stop straggling branches, and rub off weak ill-placed shoots. Vigorous old Isabella vines, upon having the ripest of the present season's rods pruned during this and next month, will give a second crop of fruit. The cuttings also, if planted, will form strong roots before the planting season. Apricots and China peaches should be budded. Plant banana and pine apple suckers. Trench land intended for planting next season, to give it the sweetening influence of the summer's sun.

FIELD.—Keep the land clean with the horse-hoe. Stop tobacco plants as required, to direct the sap into the leaves intended for the crop, and remove caterpillars. In making oaten hay, cut the crop when well in ear, but before the seed near mature: the whole plant is then in the most nourishing condition.

DECEMBER corresponds to June in Great Britain. It is a month of usually fierce sunshine and cloudless skies; the nights are sometimes pleasantly cool. In December 1879 the weather was a little cooler than usual during the month, the mean shade temperature, 77.6 deg., being 0.6 deg. under the average of this month for the last ten years, and 2.0 deg. under the previous three years. The highest reading in shade, 99.0 deg., was on the 23rd; the lowest on grass, 56 deg., was on the morning of the 17th. The mean

barometric reading, 29.853 inches, was 0.072 inches under the average of the month; the highest, 30.113 inches, was at 9 a.m. on the 31st, and the lowest, 29.426, at 3 p.m. on the 19th. Rain (which varies much in quantity during this month) fell on 13 days; the total fall, 5.39 inches, being 1.07 inches under the average of the previous ten years. The greatest fall during 24 hours, 1.26 inches, was on the 12th. The total rainfall for the year 1879, was 67.30 inches, on 157 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR DECEMBER.

GARDEN AND ORCHARD.—F e seeds should be protected during the summer months from the direct rays of the sun by some light cover a foot or two above the ground. Thin calico or light open brushwood, not too dense, would be suitable. If the seed beds were well watered with liquid manure, so as to thoroughly soak the soil, a few hours before sowing the seed, and the latter was covered by sifting over it some stable litter, there would not be many failures even in summer. Sow cabbage, cauliflower, French beans, mustard, cress, lettuce, endive, okra, radish, &c. All vacant land should be well manured and dug two spits deep. Manure and dig as the crop comes off, and the land will be ready for planting after the first shower. Place straw under the peach trees upon which the fruit may fall without bruising. Straggling wood shoots should be stopped,

to keep the trees in form, and prevent the weaker branches being robbed of their share of nourishment. Trench and manure land intended for planting with fruit trees or vines. On the slightest appearance of oidium among the vines, or American blight among the apples, dress them as previously directed. Those who object to the use of sulphur and lime in their dry state may boil one pound of sulphur and one pound of lime in a gallon of water for half-an-hour. One pint of this when strained may be mixed with ten gallons of water and applied to the affected vines with a syringe.

FIELD.—Keep crops clean. Dig potatoes as soon as ripe, as they will not keep in the soil; and have them collected as they are dug, or the sun will cause them to rot. Plant maize.

THE COLONY OF QUEENSLAND.

THE Colony of Queensland, the youngest of the Australian dependencies—its separate existence dating only from December 10th, 1859—comprises the whole of the North-Eastern portion of the Continent of Australia; its boundaries being—on the North the Gulf of Carpentaria, on the East the Pacific Ocean, on the West the Northern Territory of South Australia—the dividing line being the 141st meridian of longitude from the 29th to the 26th parallel, and thence the 138th meridian—and on the South the Colony of New South Wales. Its estimated area, according to a corrected return, is 669,520 square miles, or 428,492,800 square acres, being about twelve times the size of England and Wales. On August 1, 1879, this area was considerably increased by the annexation of a number of islands contiguous to the Coast. REGISTRATION OF BIRTHS, MARRIAGES, AND DEATHS.

Every birth must be registered within sixty days, and every death within thirty days next hereafter respectively; and neglect of this regulation renders the parties, whose duty it is to register, liable to a fine not exceeding £10. If sixty days have elapsed from the date of birth, the law requires the parent, or other person making the application to register such birth, to pay a fee of two

shillings and sixpence, and to make a solemn declaration of the facts before a Justice of the Peace, prior to the registration. If possible in all cases the father or mother ought to sign as informant. If unable to write, let a mark be made. No birth can be registered after three years have elapsed from the date thereof: but a record will be made in the Registrar General's office if information be supplied respecting such a birth.

Every Minister who has celebrated a marriage shall, within one month thereafter, transmit, (in accordance with the Act 28 Victoria No. 15) the original certificate to the Registrar of the District, and every Minister who shall fail to transmit the certificate to the District Registrar, shall be liable to a fine of not less than £10 and not exceeding £50. Marriages must be solemnised between the hours of 8 a.m. and 8 p.m. Persons under age must produce the written authority of parents or guardians, signed by them in the presence of a Justice of the Peace, Registered Minister, or District Registrar, or the marriage cannot take place.

In every case of burial, the minister or officiating person ought to receive from the undertaker or person having charge of the funeral, a certificate from the District Registrar, certifying the registration of the death—unless in the case of inquest, when a certificate from the Coroner or Magistrate holding the inquest, will be sufficient; and if any dead body shall be buried without such certificate, the person who may bury the same, or perform any funeral or religious service for the burial, or who shall in any way dispose of the body, shall forthwith give notice of the facts to the District Registrar; and undertakers are bound under a penalty not exceeding £10 to lodge with the District Registrar, immediately after the burial, a Certificate of such burial signed by themselves and countersigned by two witnesses.

ELECTRIC TELEGRAPH.

The Telegraph Stations in Queensland are open to receive messages from 9 a.m. to 6 p.m. daily, Sundays excepted. On Sundays the officers are in attendance at 9 a.m. for the receipt and despatch of telegrams of urgent importance. On special occasions when messages may be received after office hours an additional charge of 50 per cent. on the ordinary rate is made. The following are the ordinary charges:

Between any two stations in the colony—		To stations in South Australia (exclusive of the Overland Line)—	
Ten words (exclusive of name and address of sender and receiver) ..	s. d. 1 0	Ten words ..	s. d. 3 0

To stations in New Zealand—		To stations in West Australia —

Each additional word ..	1 0	Every additional word ..	0 4

Press messages are charged one-half the ordinary rates (except to the colony of New Zealand) and are exempt from the additional charge for transmission after ordinary office hours.

At country post towns, where no electric telegraph station is opened, Postmasters have been appointed receivers of messages, which they will forward for transmission to the nearest electric telegraph station, by first post. Persons desirous of using this means of communication will hand their message to the postmaster, together with the cost of transmission, twopence for postage, and sixpence for the postmaster's fee. Message forms may be obtained on application to any such post-office, and the postmaster and station-master will furnish information as to the cost of transmission.

Payment of all charges in advance will be required, except the following: Replies to interrogatory messages which contain the words "*Reply paid*." Messages for transmission within the colony of Queensland, or to any of the Australian Colonies and New Zealand marked "*Collect*," when the sender is known to the officer in charge of the despatching station, and guarantees in writing, that in the event of the message not being paid for on delivery, it will be paid for on demand by the sender; in all such messages, the word "*Collect*" must be written by the sender as the last word of the message to be despatched; press messages to be paid for at receiving station on delivery.

When the sender wishes to pay for a reply, or to have the message repeated or posted, instructions are to be inserted in the address immediately before the name of the terminal station. Messages which are addressed beyond the limits of delivery can be posted to their destination free of charge.

Messages will be delivered free within one mile of the station to which addressed. If beyond that distance according to the instructions contained in the address. Expenses incurred for portage, cab hire, or boat hire, payable by the receiver, will be charged. Messages addressed beyond the limits of delivery, or which do not contain special directions as to transport, may be posted to their address by the terminal telegraph station-master free of charge. In the event of an interruption to communication by which messages may be unusually delayed, it will be optional with the senders, on application before transmission, to withdraw their messages and receive back the amount paid. If desired, messages of consequence can be repeated from stations at which received to stations from which originally sent, on payment of an additional half-rate; but no responsibility will be undertaken nor any claim for compensation entertained for any errors or mistakes in transmission or delay in delivery of messages.

Telegrams to stations within the colony marked "*Urgent*" will be received and transmitted as "*urgent*" messages, and will take precedence of all ordinary messages. Double rates are charged for these messages.

ELECTRIC TELEGRAPH—Continued.

Envelopes containing messages for transmission by telegraph from any place in Queensland, posted at any Post Office not being a Telegraph Office, with the words "Telegraph Message only" written thereon, above the address, and directed to the nearest Telegraph Office, may be forwarded free of postage, and the message will be telegraphed provided the full charge of transmission is affixed in unobliterated postage stamps. If the place of destination is beyond the colony, an additional 10 per cent. in stamps must be affixed.

A list of the Money Order Offices and Telegraph Stations will be found in the Postal Gazetteer.

INTERNATIONAL TELEGRAMS.

By the system of registration of name and address, and the adoption of the word scale of charging, the cost of telegraphing between Brisbane and London, and many of the leading cities of India, China, Japan, Europe, United States, and other countries, has been greatly reduced. It may be necessary to explain that the name and address of the sender and receiver being registered at the points of departure and arrival, a single word, letter, or number serves for their identification.

The principal conditions under which messages are transmitted are as follows:—

Words must not exceed ten letters. Only ordinary dictionary words allowed. Groups of figures will be charged at the rate of five to the word. Cypher telegrams may be used, but if so, must be collated, that is, repeated back in their entirety from station to station, for which half-rate additional will be charged.

Registration can be effected at the Central Telegraph Office, Brisbane. No fee is charged. Messages can also be sent through Reuter's Telegraph Co., and the Oriental Co., both of which have agents in Brisbane.

DIRECTIONS FOR MAKING A WILL.

A WILL cannot be made in language too simple or concise: it must be written with ink, and must be signed at the end of each sheet (if there be more than one) by the testator in the presence of two or more witnesses.

The witnesses who must not be interested in the will, must strictly comply with every particular required by the attestation clause, at the end of which clause they must sign their names. A witness is not bound to know the contents of the Will.

FORM OF A WILL.

This is the last Will and Testament of me made this day of One thousand eight hundred and eighty as follows. I give, devise, and bequeath all my messuages, land, tenements, and hereditaments, and all my household furniture, ready money, money secured by life assurance, goods and chattels, and all other my real and personal estate and effects whatsoever, unto my dear wife (or other person, as may be) her heirs, executors, administrators, and assigns, to and for her and their own absolute use and benefit, according to the nature and quality thereof respectively, subject only to the payment of my debts, funeral and testamentary expenses and the charges of proving and registering this my Will. And I appoint my said wife executor of this my Will, and hereby revoke all other Wills.

In witness whereof I have hereunto set my hand the day and year above written.

Signed published and acknowledged by the said as and for his last Will and Testament in the presence of us, who in his presence and at his request, and in the presence of each other, have subscribed our names as witnesses.

A CODICIL

To a Will is to be made with the same regulations as the Will itself, and may be written thus:—This is a Codicil to my last Will and Testament, bearing date the day of 188 and which I direct to be taken as part thereof. I give, devise, and bequeath, &c. As witness my hand this day of 188 .

NOTE.—Obliterations and alterations of any sort in a Will ought if possible, to be avoided; when of necessity made, they must be signed by the Testator and Witnesses on the margin, or as near to the alteration as possible.

Marriage after making a Will renders the Will void.

If a witness is interested in the Will the claim to such interest becomes forfeited.

If a person wishes to dispose of all his property in one gift, the words "all my real and personal estate" may be used.

Personal property left without a Will is divisible as under: If the deceased should leave Children and no Widow, the whole property is to be divided equally among the Children. If he leave a Widow and Child or Children, the former is entitled to one-third, and the latter to the remaining two-thirds. If he leave a Widow and no Child, the former is entitled to half, and the next of Kin the remainder as follows:—A Father, the whole amount; If no Father; a Mother, Brothers, or Sisters, or their issue, equal portions; If none, Uncles, Aunts, Nephews and Nieces, equal portions.
